

Errata for *Automorphisms of first-order structures*

R. W. Kaye and H. D. Macpherson (eds),
Oxford University Press, 1994.

20th June, 1995

Page 78, line 23. Delete the words ‘are called’.

Page 93, line 26. For ‘is brief’ read ‘will be brief’.

Page 97, line 4 up. For $\mathbb{N}$ read $\text{Sym}(\mathbb{N})$.

Page 220. Replace the first seven lines (from ‘The subgroups K of ...’ to ‘ $\alpha_x = id$ ’.) with the following passage.

The subgroups K of $\prod_{x \in N} \text{Sym}(F)$ which are kernels of finite covers of N are exactly the groups of the form

$$K_H^L = \{\alpha \in \prod_{x \in N} L : \forall x, y (\alpha_x H = \alpha_y H)\},$$

where L is a subgroup of $\text{Sym}(F)$, H is a normal subgroup of L and α_a is the action on F which corresponds to the projection of α on $F_a = \{a\} \times F$.

If K is a kernel of some cover then by Ziegler (1992) the groups L and H can be found in the following way: let $a \in N$, then

$$\begin{aligned} L(K) &= \{\alpha_a : \alpha \in K\}, \\ H(K) &= \{\alpha_a : \alpha \in K \text{ and } \forall x \neq a (\alpha_x = id)\}. \end{aligned}$$

Page 269, line 4 up. For frakB read $\mathfrak{B}$.

Page 285, line 17. For $0 < p \leq q \leq k$ read $0 \leq p < q \leq k$.

Page 298, line 20. For anomolous read anomalous.

Page 311, line 23. For $M \models \text{Th}(\mathbb{N})$ read $M \not\models \text{Th}(\mathbb{N})$

Page 320, line 4 up. For *action of a subgroup of transitive permutation group* read *action of a subgroup of a transitive permutation group*.
